

Radiation material testing: Building up a dose profile using engineering tools

COMET : Modélisation et impact des radiations spatiales sur les matériaux et cellules solaires

NOOUS, Toulouse

Marine AUBRY

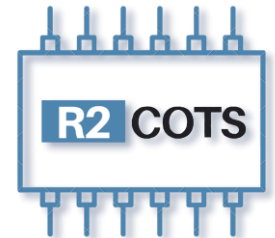

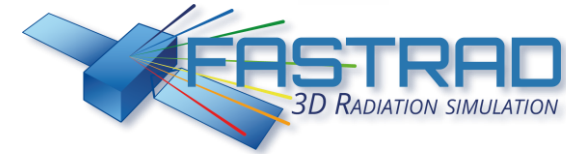

Outline

- TRAD presentation
- Space environment
- Our engineering tools
- Material dose curve calculation
 - Test matrix build-up

TRAD - Tests & Radiations

A leading and innovative company providing high reliability support and products for radiation assurance services, for space, nuclear and other harsh environments.

Created in 1994

**Toulouse
Montpellier**

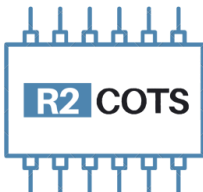

**81
Employees**

**9 M€
Turnover**

SERVICES

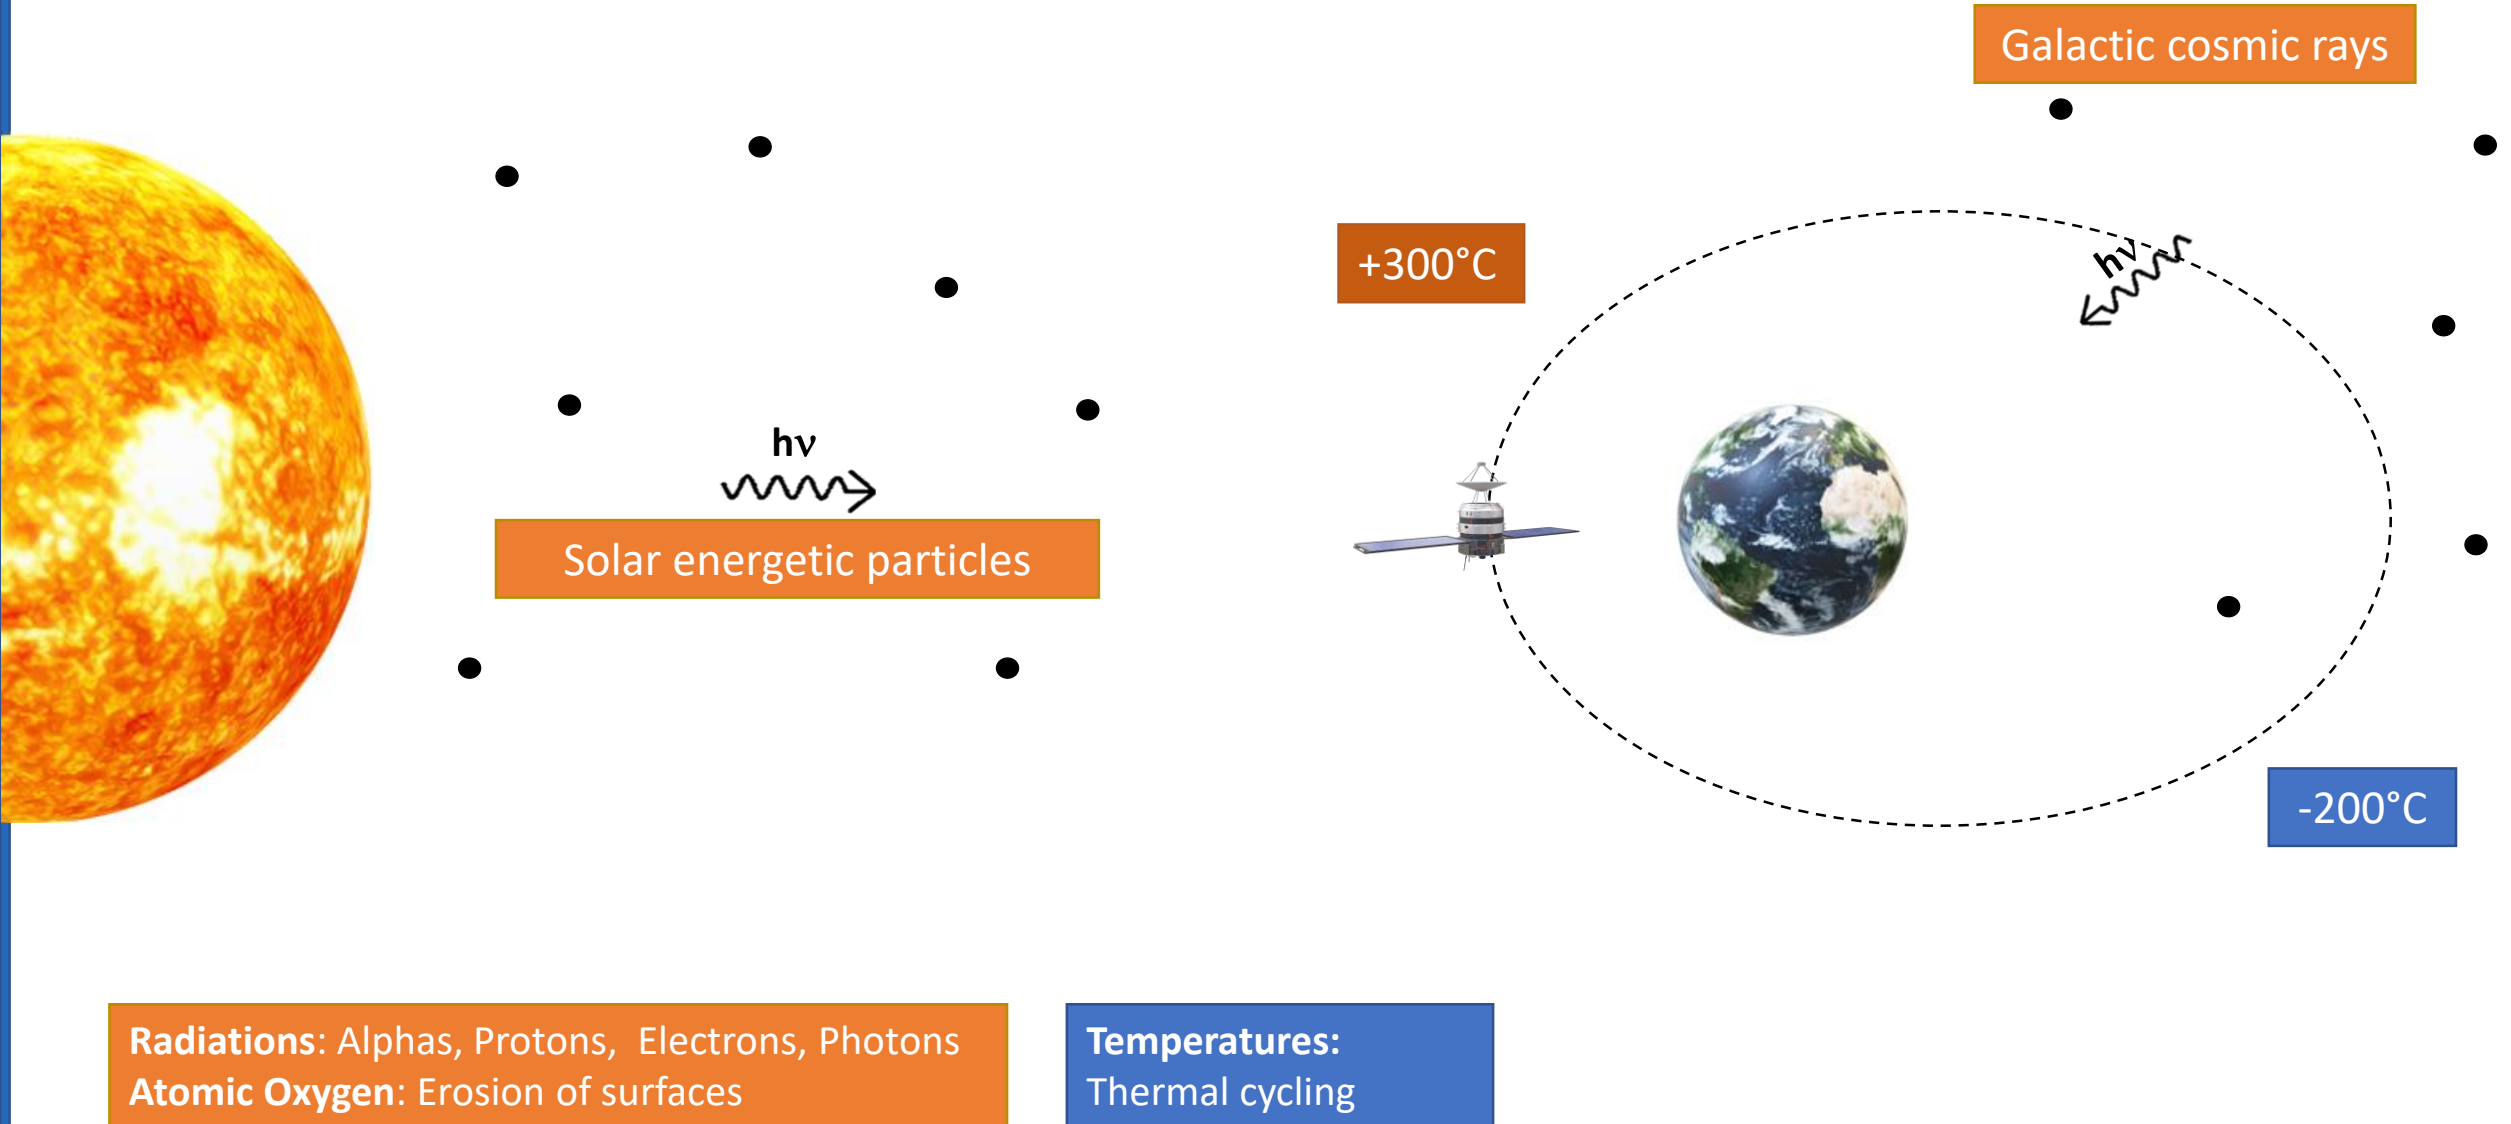

Space environment

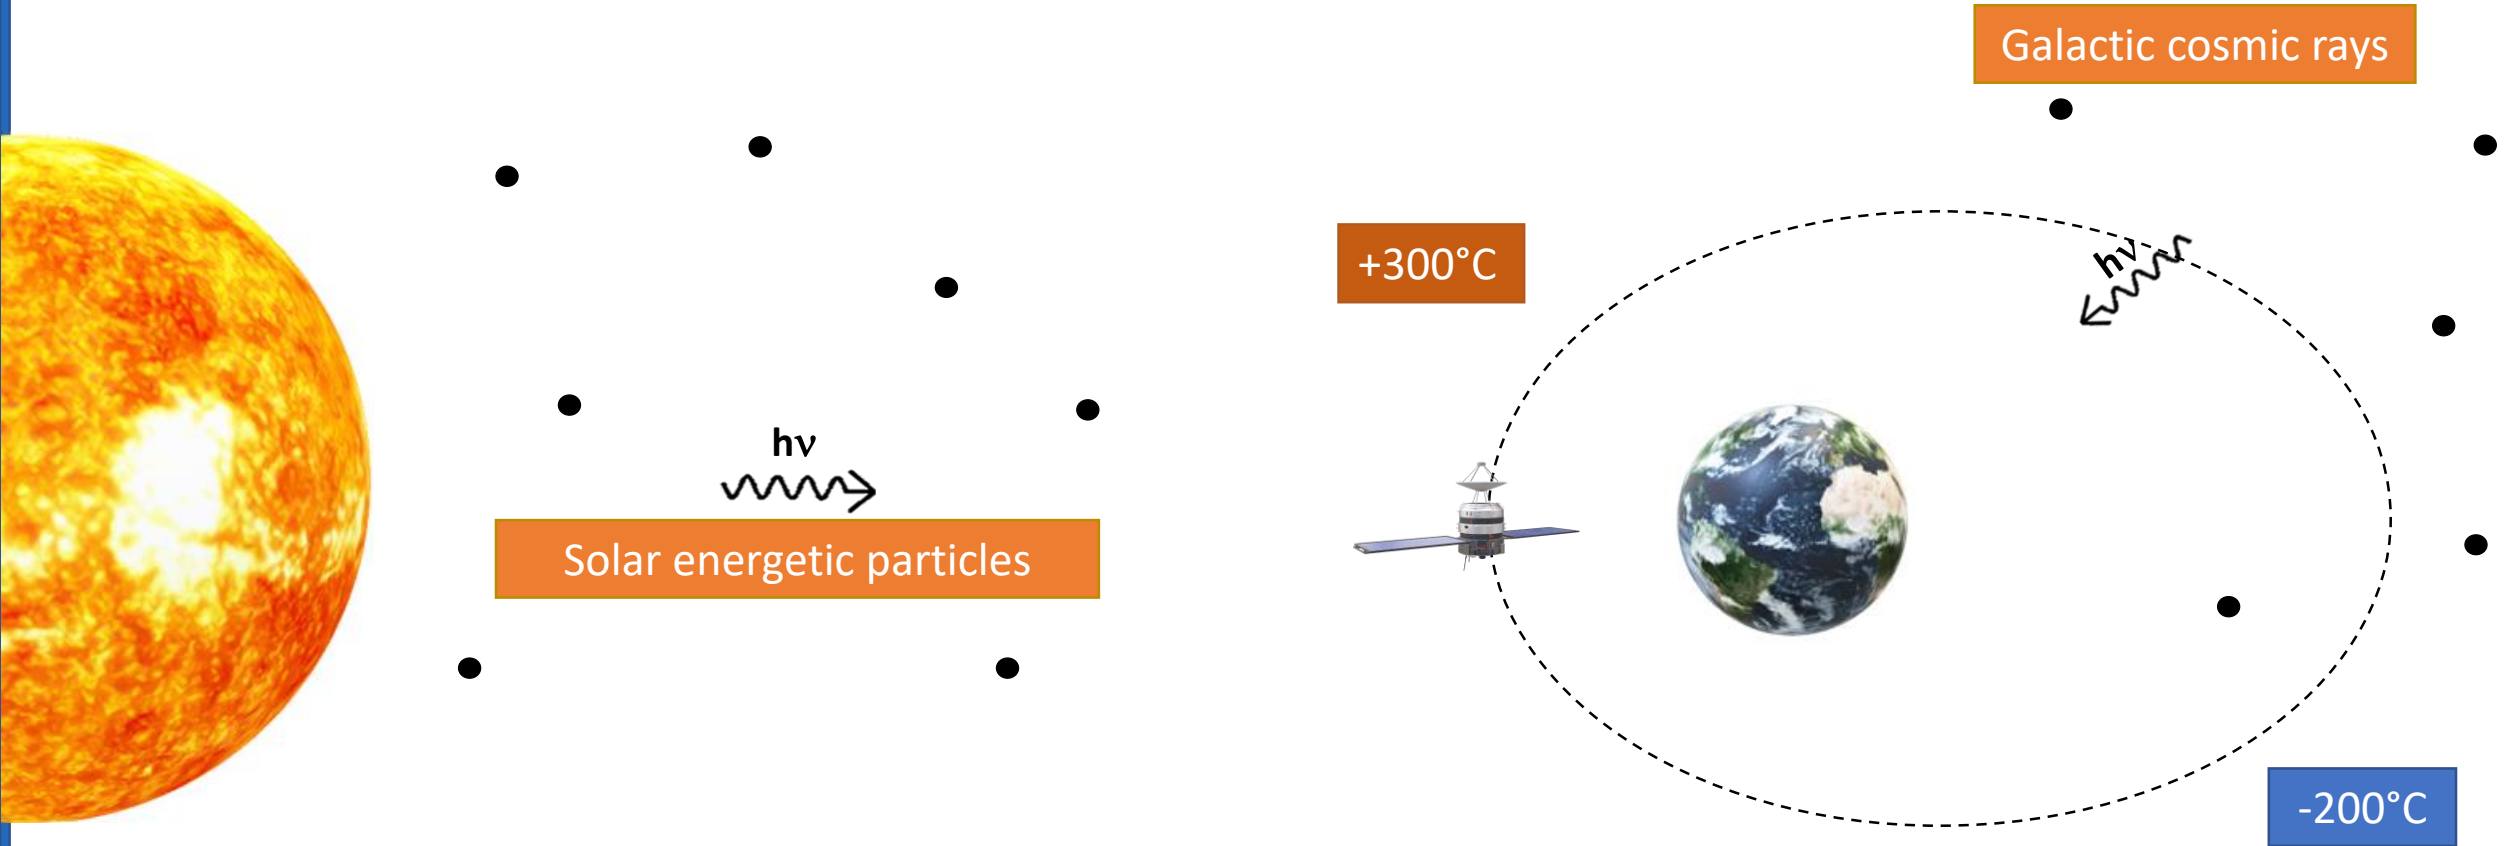

Radiations: Alphas, Protons, Electrons, Photons
Atomic Oxygen: Erosion of surfaces

Space environment

Space environment

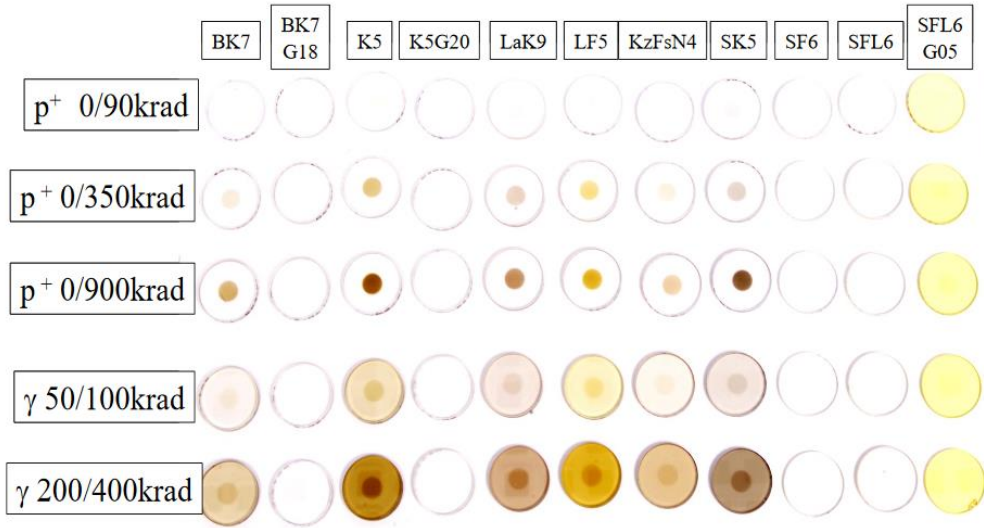

Radiations: Alphas, Protons, Electrons, Photons
Atomic Oxygen: Erosion of surfaces

Temperatures:
Thermal cycling

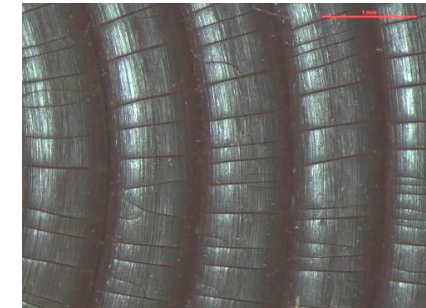

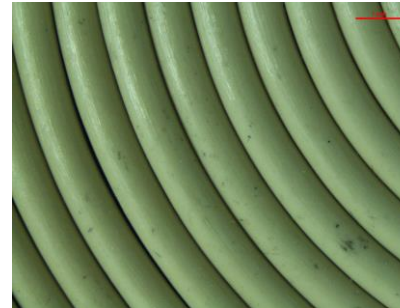

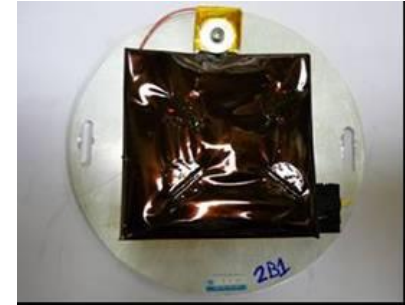

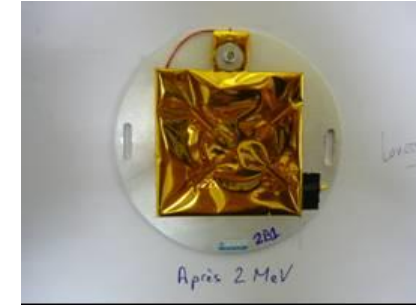

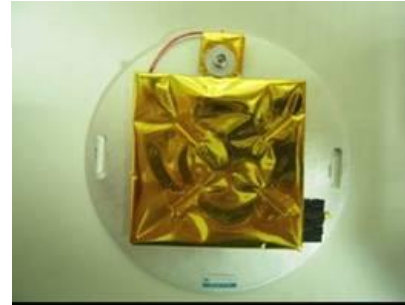

Pieces Impacts:
Mechanical damages

Some examples of radiations effects

Source: CNES

Dose increase

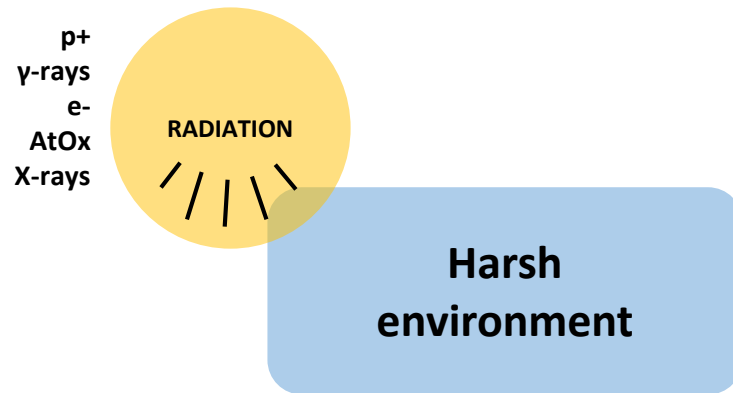

The primary functions of materials can be degraded or even annihilated when they do not resist radiation sufficiently

Our material acitivities

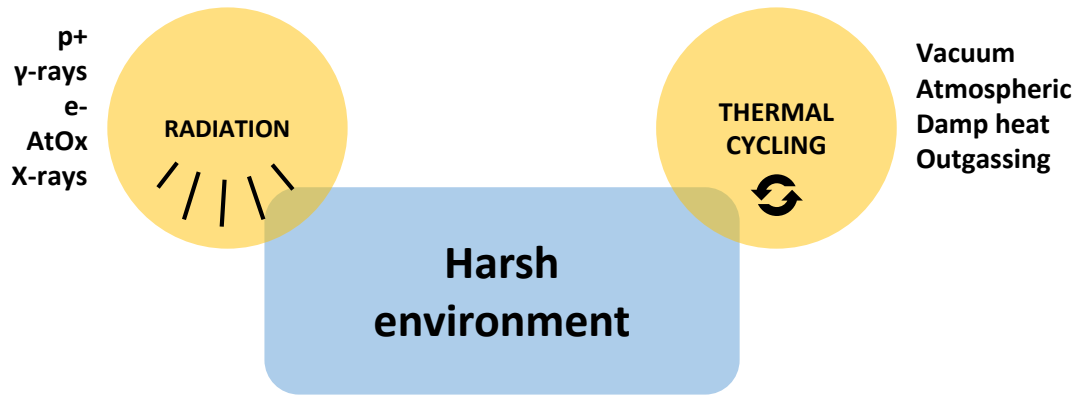

**Harsh
environment**

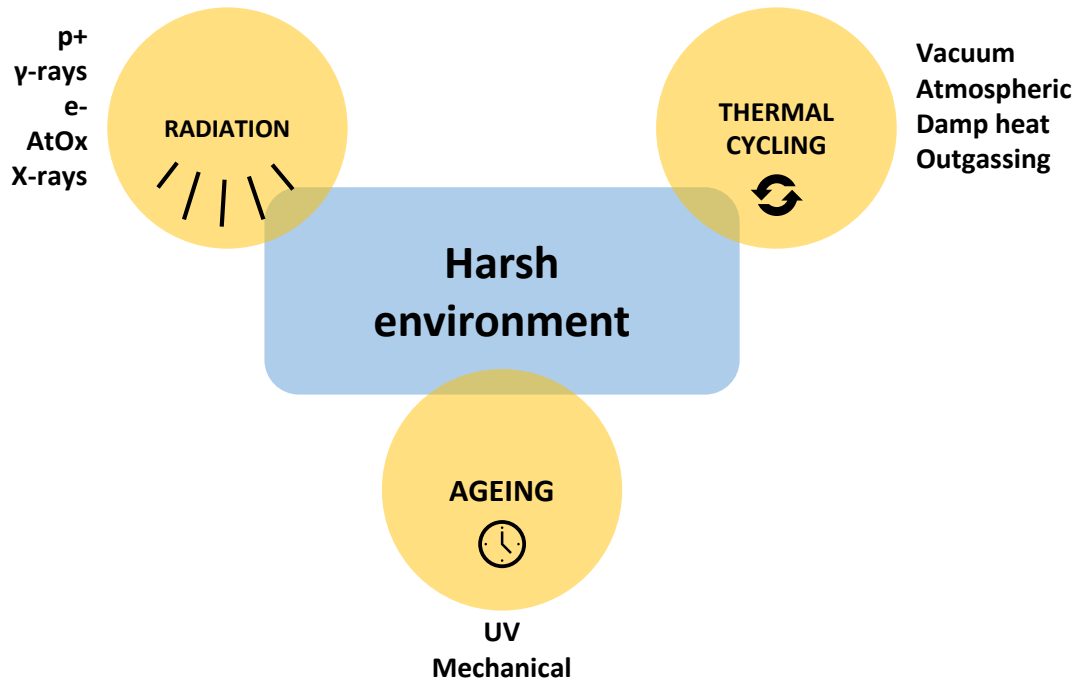

Our material activities

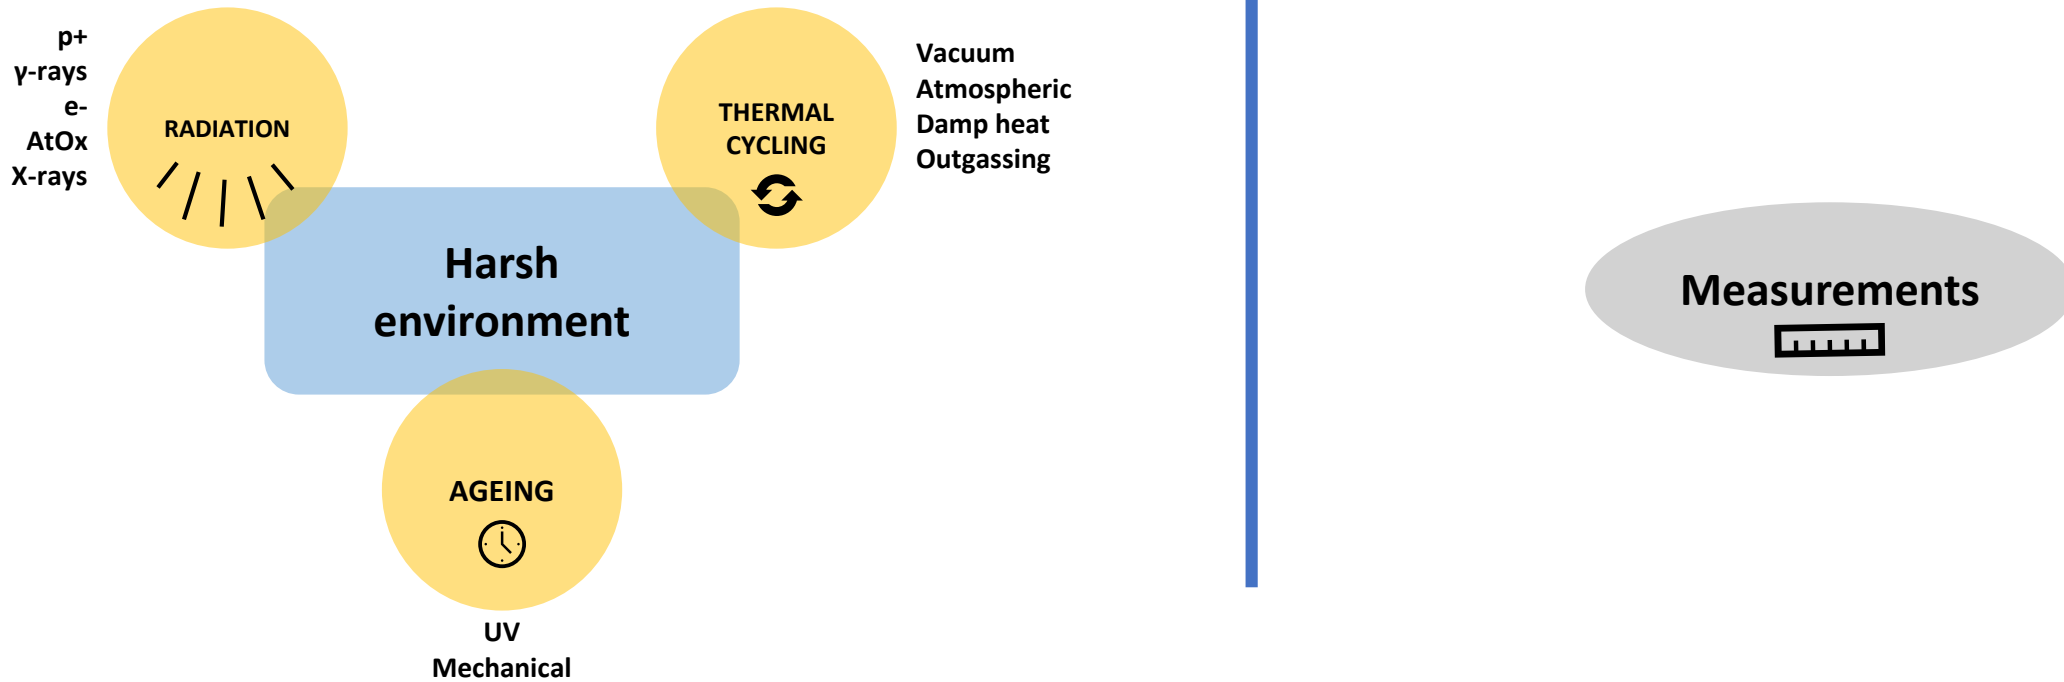

Our material activities

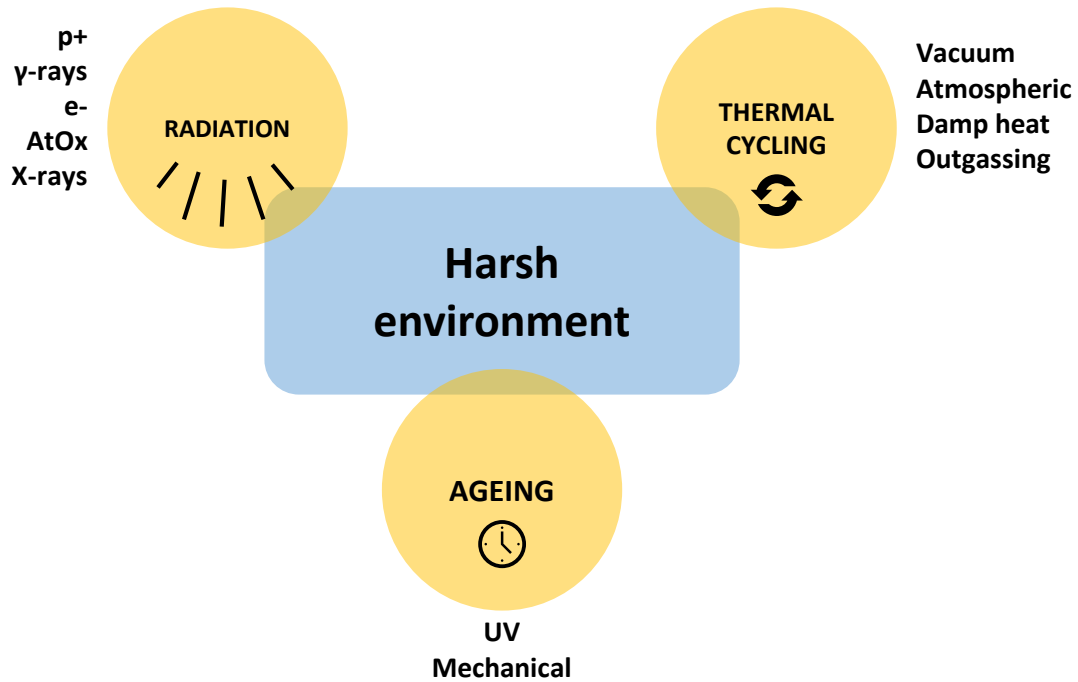

Our material activities

Our material activities

Our material activities

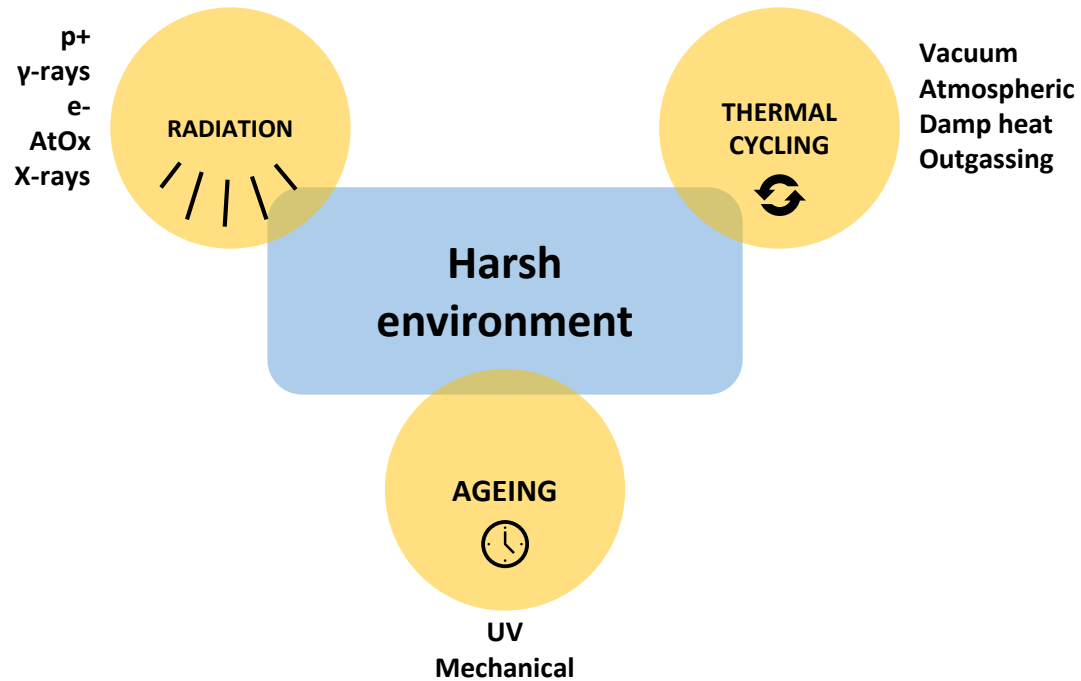

Electrical characterization:

- Solar cells
- Isolation
- Resistance

Measurements

Our material activities

Electrical characterization:

- Solar cells
- Isolation
- Resistance

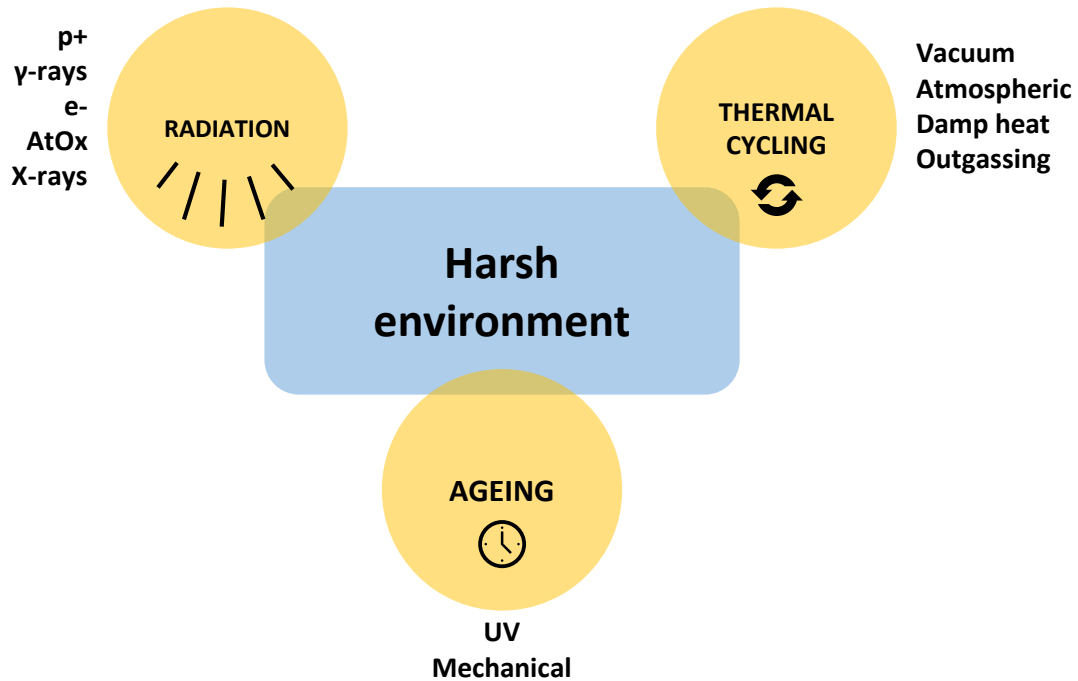

Optical characterizations:

- Bulks
- Fibers
- Coatings

Measurements

Our material activities

Electrical characterization:

- Solar cells
- Isolation
- Resistance

Optical characterizations:

- Bulks
- Fibers
- Coatings

Measurements

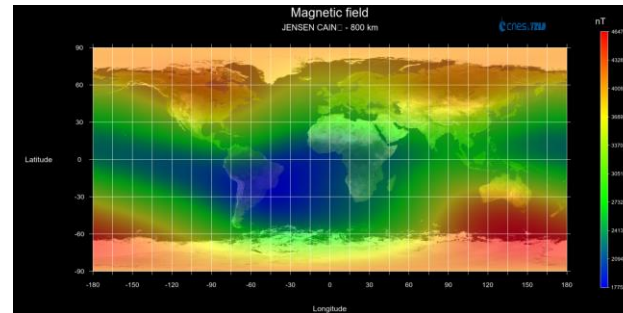

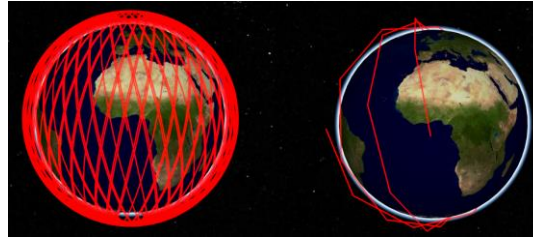

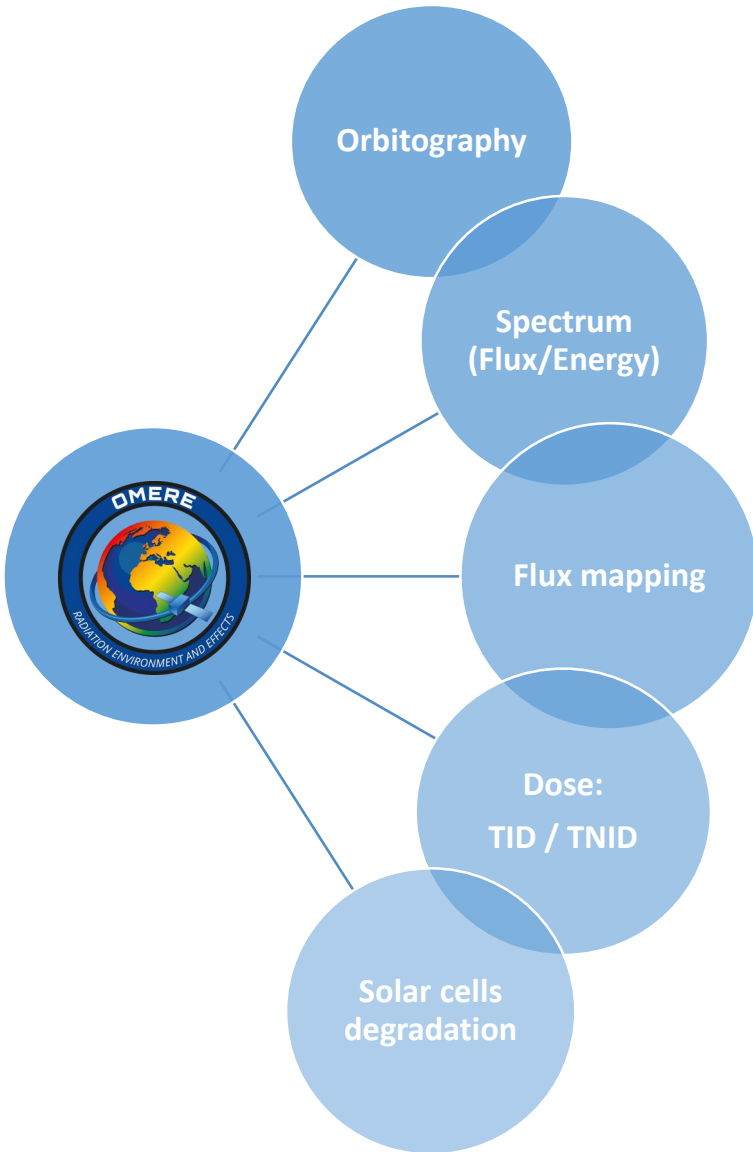

Physical observation:

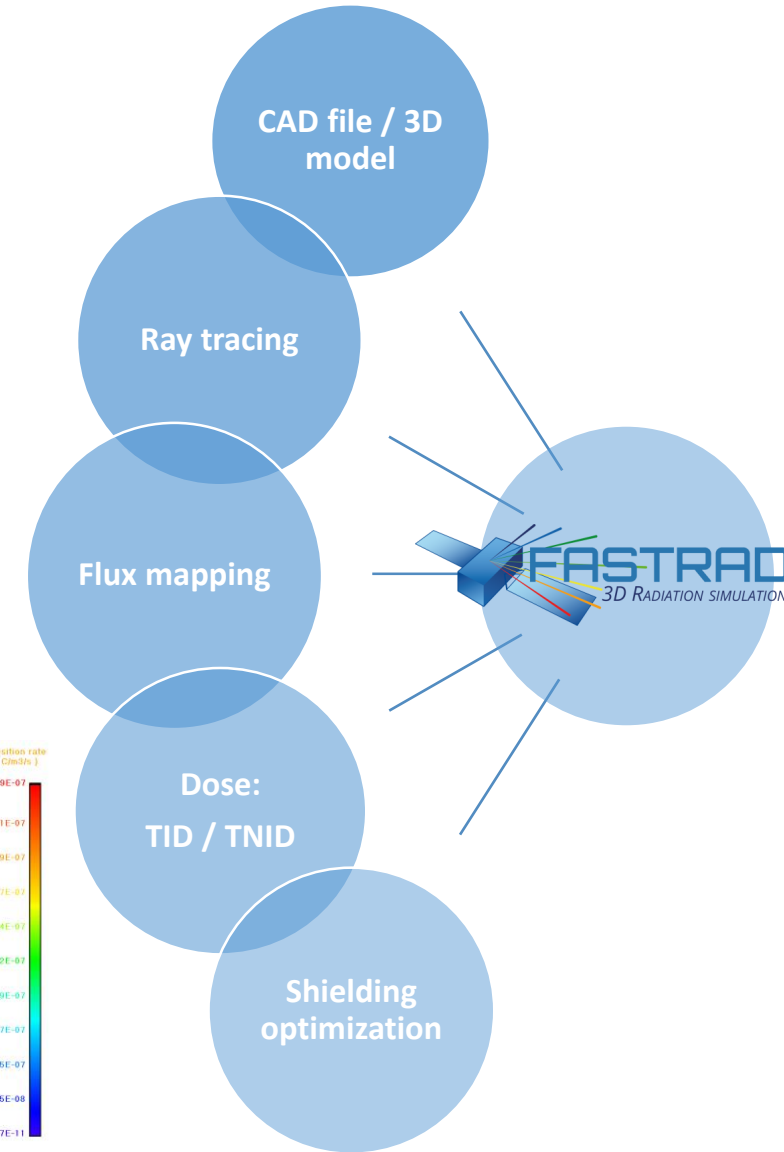

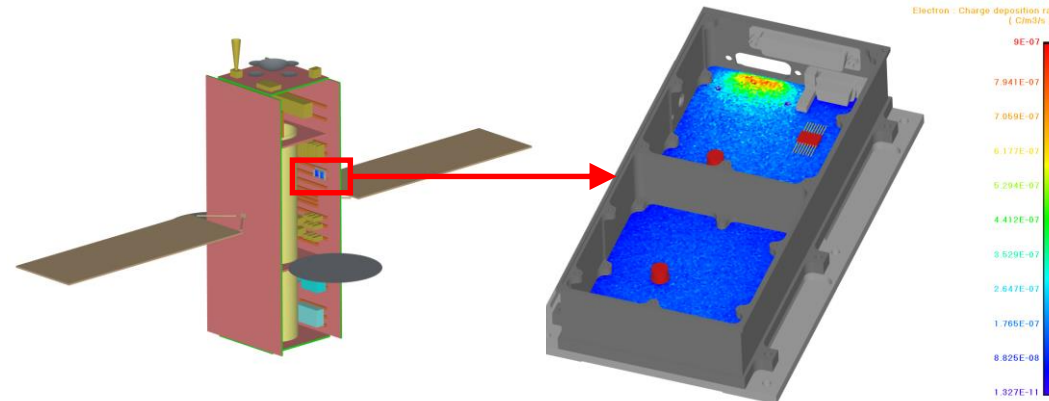

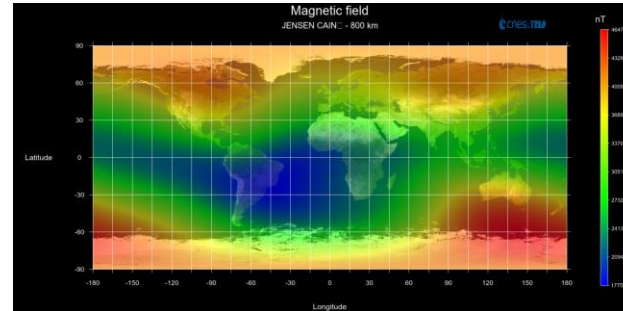

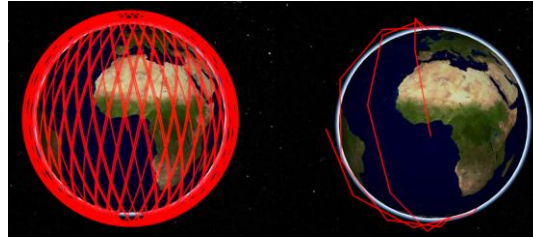

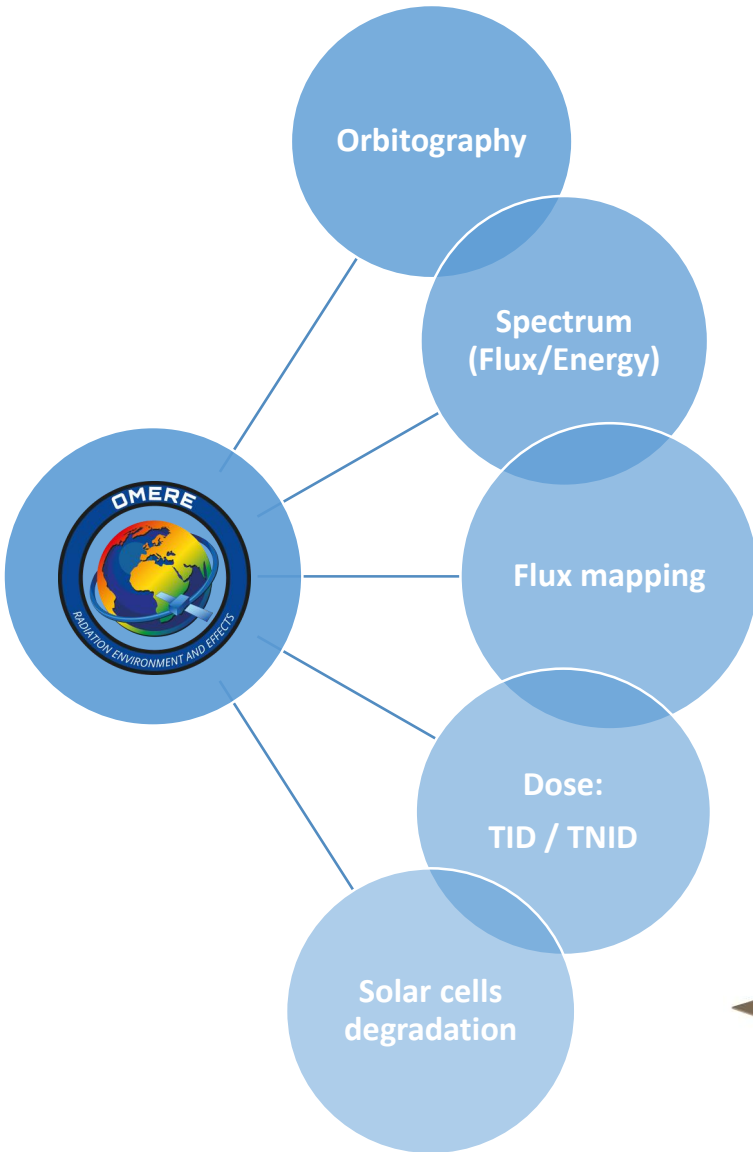

- Microscope
- SEM & X-rays analysis

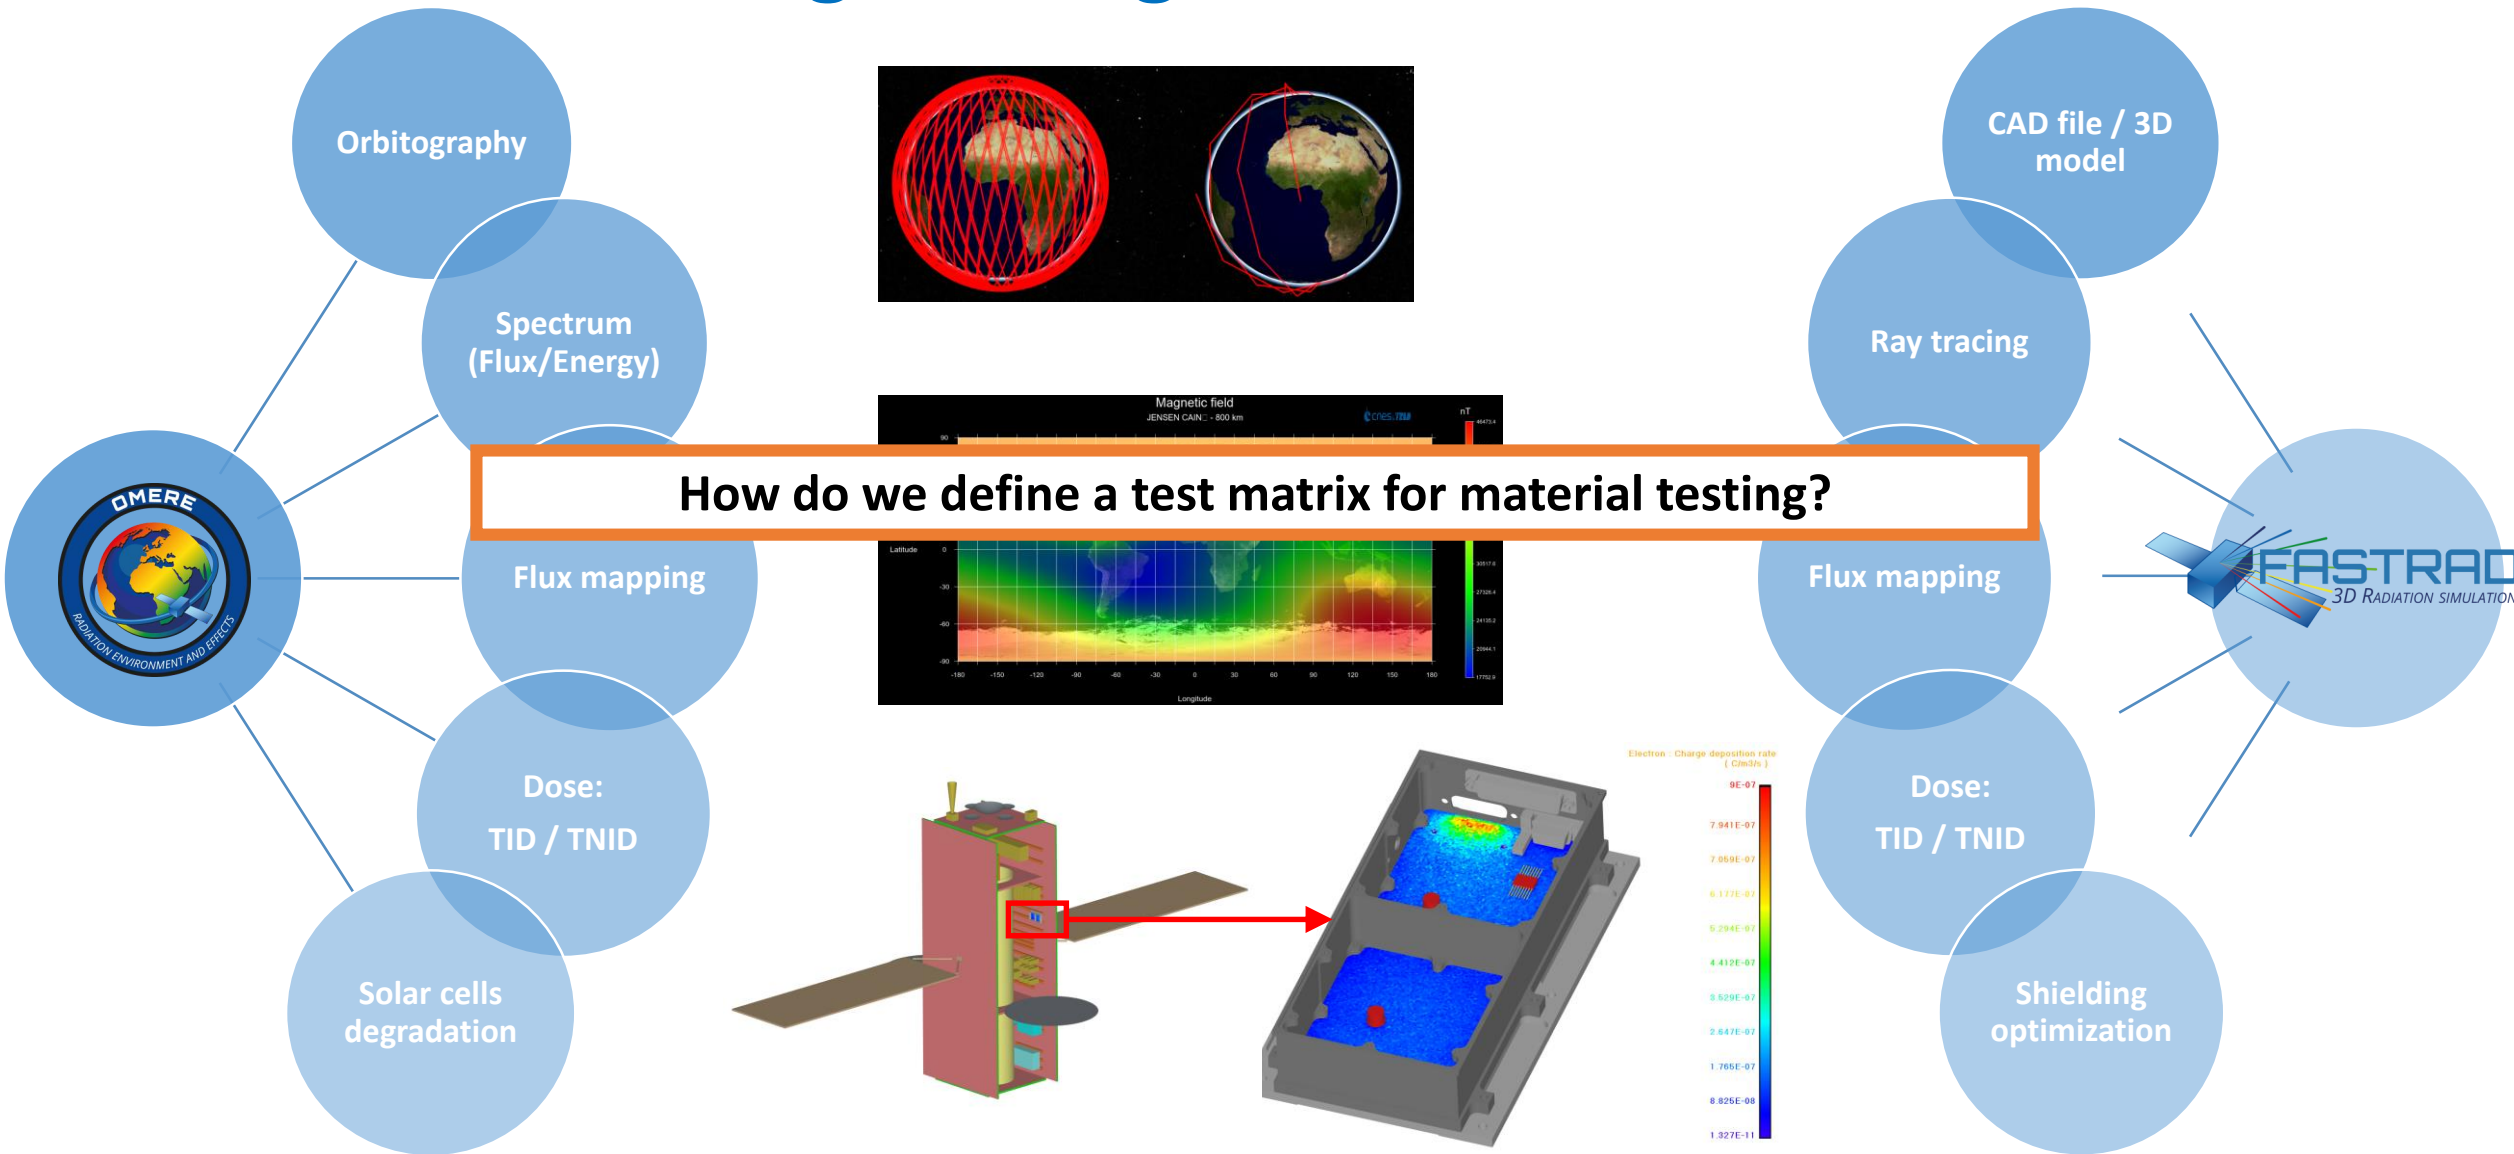

Our engineering tools: OMERE - Fastrad

Our engineering tools: OMERE - Fastrad

Our engineering tools: OMERE - Fastrad

Philosophy of radiation testing of materials

- Qualification campaign
 - Mission environment definition
 - Geometry definition
 - Mission dose profile
 - Particles and energy selection for qualification campaign
 - Presentation of results – green/red flag from client for experimental tests
 - Experimental sequence (irradiation sequence, thermal cycling, characterization...)
 - Material qualification report: Fail / Pass?

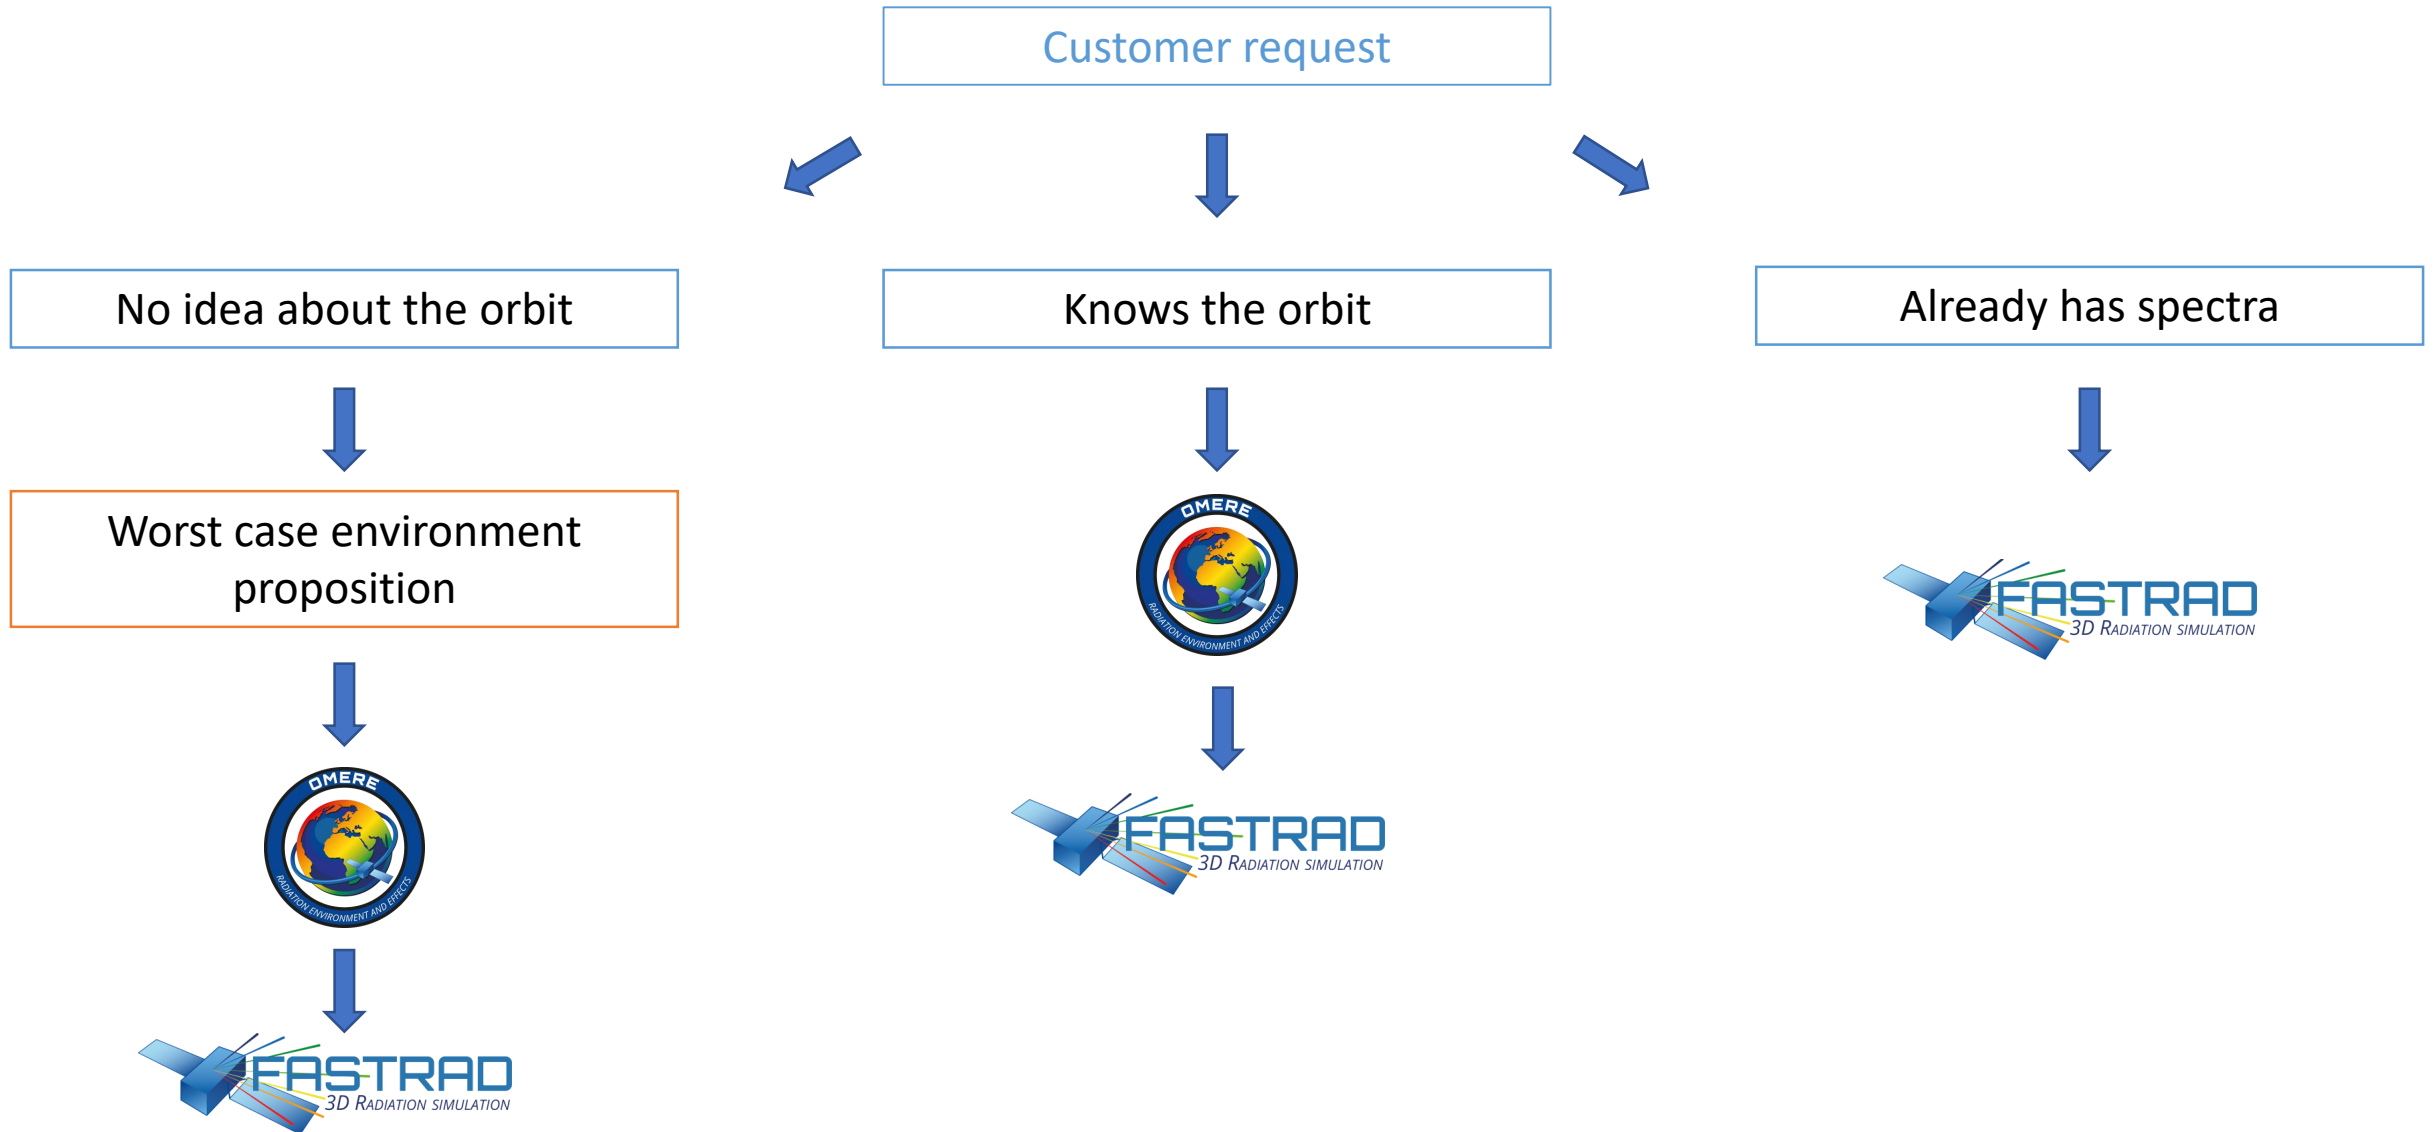

Philosophy of radiation testing of materials

- Qualification campaign

- Mission environment definition
- Geometry definition
- Mission dose profile
- Particles and energy selection for qualification campaign
- Presentation of results – green/red flag from client for experimental tests
- Experimental sequence (irradiation sequence, thermal cycling, characterization...)
- Material qualification report: Fail / Pass?

Three ways to do so

Environment definition

Input: Mission

- Generic orbit
- File import

Environment definition

Input: Mission

- Generic orbit
- File import

Environment

- Particle sources (radiation belts, solar particles, cosmic rays)
- Standard ECSS and US models.

Environment definition

Input: Mission

- Generic orbit
- File import

Environment

- Particle sources (radiation belts, solar particles, cosmic rays)
- Standard ECSS and US models.

Results:

- Trapped electrons
- Trapped protons
- Solar Mean Protons

Input for FASTRAD

Dose curve definition

Input : Radiation model

- Import STEP file from another CAD software
- Complex geometry of spacecraft/unit
- Realistic materials
- Component database

Dose curve definition

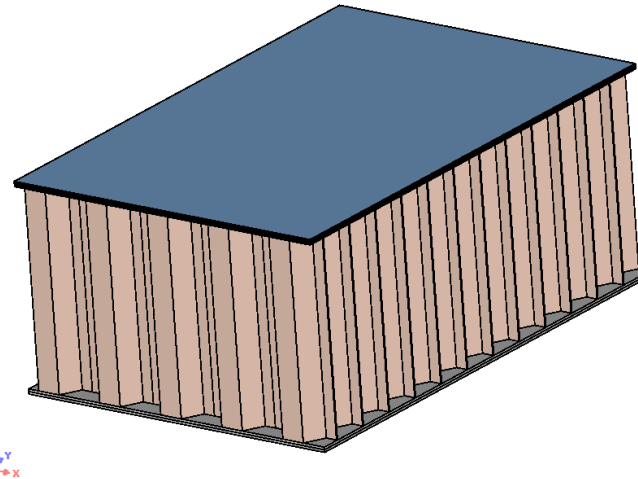

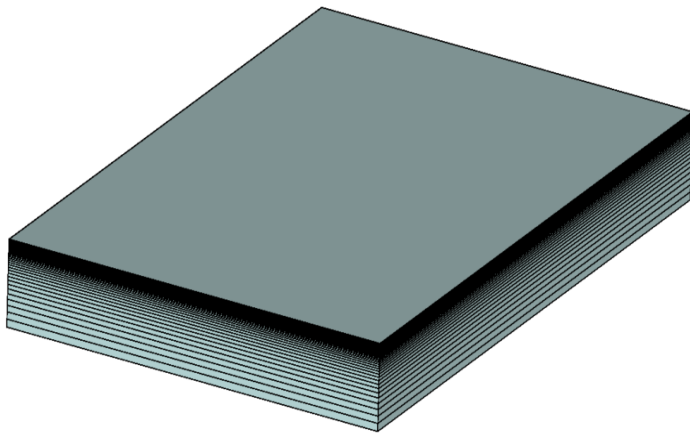

Input : Radiation model

- Import STEP file from another CAD software
- Complex geometry of spacecraft/unit
- Realistic materials
- Component database

Modeling step

- Simplified or multi-layer model
- Chemical composition
- Density

Dose curve definition

Input : Radiation model

- Import STEP file from another CAD software
- Complex geometry of spacecraft/unit
- Realistic materials
- Component database

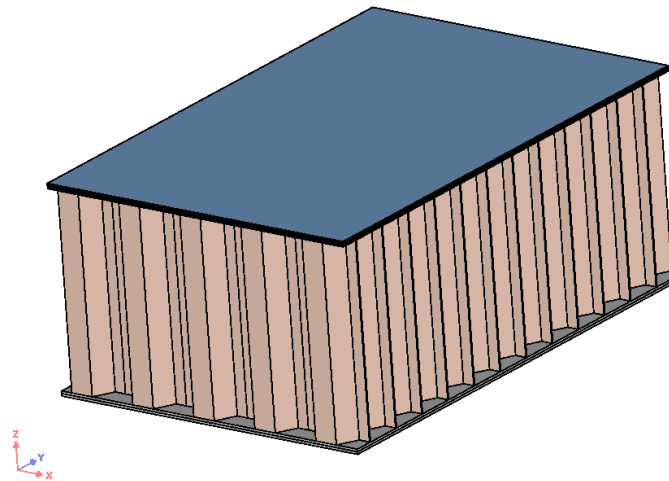

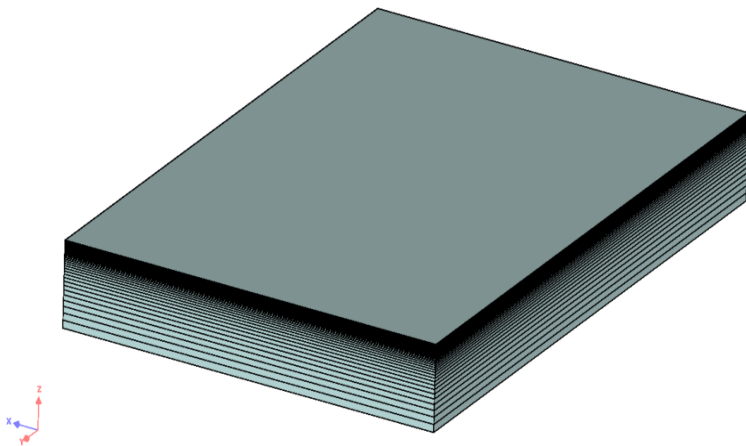

Modeling step

- Simplified or multi-layer model
- Chemical composition
- Density

TID calculations

- Forward Monte-Carlo method
- Space environment as sources
- Layers as sensitive element

Dose curve definition

Input : Radiation model

- Import STEP file from another CAD software
- Complex geometry of spacecraft/unit
- Realistic materials
- Component database

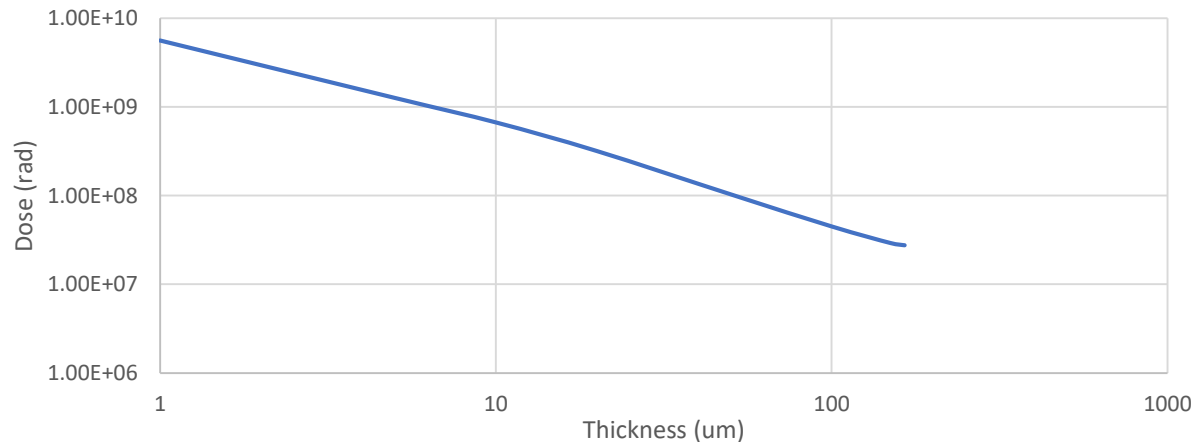

Modeling step

- Simplified or multi-layer model
- Chemical composition
- Density

TID calculations

- Forward Monte-Carlo method
- Space environment as sources
- Layers as sensitive element

Material dose curve

Test matrix definition

Input: Radiation model

- Same as previously

Test matrix definition

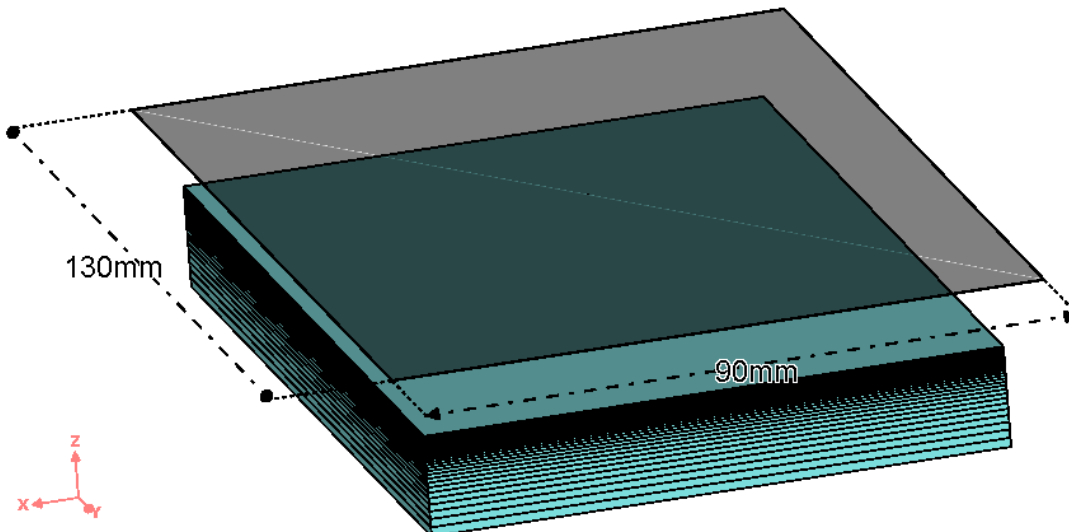

Input: Radiation model

- Same as previously

Modeling beams

- Rectangular beam
- Choose of beam energy / nature based on:
 - our beam portfolio
 - the samples characteristics

Test matrix definition

Input: Radiation model

- Same as previously

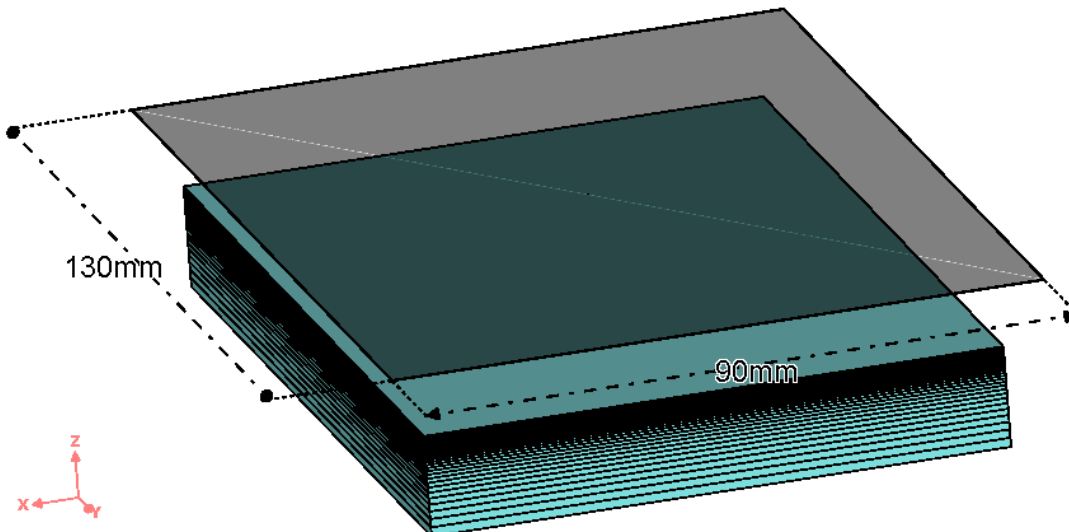

Modeling beams

- Rectangular beam
- Choose of beam energy / nature based on:
 - our beam portfolio
 - the samples characteristics

Launch of several calculations

Conclusion

- **Test matrix must be elaborated to reproduce space environment**
- **TRAD uses its own softwares to do so**
 - **OMERE for mission environment**
 - **FASTRAD for dose profile and test matrix**

Thank you for your attention
